

EASYSTOW FENDERS® Heavy Duty Inflatable Fenders

Replace bulky, hard to store conventional fenders with space saving Easystow Fenders®

Use as extra or primary fenders, Easystow Fenders® store flat or folded saving valuable storage space.

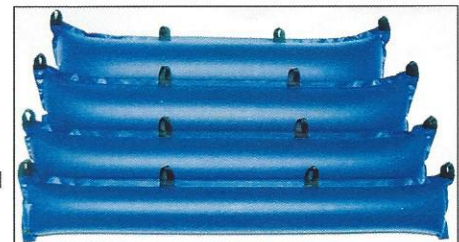

The original heavy duty models are great for locks, concrete piers and docks. The unique cover is thick, reinforced pvc with no longitudinal seam to catch or split. Standard duty fenders are great for general docking and rafting. Also made from reinforced pvc, they're lighter weight and easier to handle.

Extra long 5 foot fenders are proving to be the most popular. They're unique, useful and store in about 1/12 their inflated size. Available in original heavy duty, and standard duty with easier handling and a lower price. In many situations using one long fender is safer, easier to position and stow than multiple smaller ones. Examples include raft ups, against pilings, replacing hard to use and store fender board arrangements, and along docks, making docking safer and easier.

Easystow Fenders Feature:

- Strong, multiple attachment points using heavy 4000 lb webbing to handle chafe with no metal parts.
- Simple, easy to use valves for secure and fast inflation/deflation using any basic inflatable pump.
- Double wall construction for added strength.
- A pillow shape which helps prevent rolling out of position.
- Optional fleece covers in dark blue and black.
- A warranty against manufacturers defects for as long as you own them.
- A 60 Day full refund if not totally happy.
- Manufactured in the USA.

New in 2015, 7.5 foot long Easystow Sponsons are for rigid dinghies, small boats and canoes. Available in 4, 6, and 8" diameters. Slides in track affixed to the hull. Adds safety, protection, stability and floatation.
